25 minutes

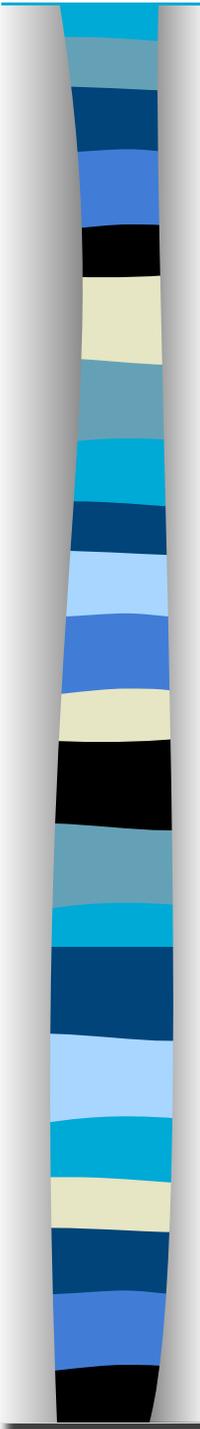

Lecture:

15 minutes

Active study skills:

60 minutes

Total

# 48a A&P: Nervous System - Introduction, Physiology, and Cells

## Class Reminders

### Early Warning:

- By class 63b, you must be signed-up for and logged into [MassagePrep.training](https://www.massagetraining.com)
- You will receive an email from our receptionist with instructions for signing up.

### Assignments:

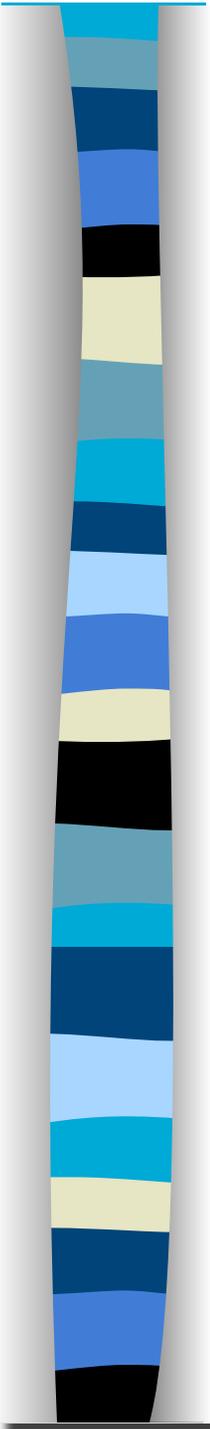

- 50b Business: Marketing: it is recommended that you watch the webinar listed in the Class Schedule.
- 53a Internship Orientation Review Questions (due before class starts)
- 55a Review Questions (due before class starts)

### Quizzes:

- 51b Kinesiology Quiz (brachialis, brachioradialis, flexor digitorum superficialis, and extensor digitorum)

### Preparation for upcoming classes:

- 49a A&P: Nervous System - Synaptic Transmission and Central Nervous System
- 49b Side-lying and Pregnancy Massage: Guided Full Body
  - Bring 2 pillows (standard size)
  - Bring 4 pillowcases (standard size)

# Classroom Rules

**Punctuality** - everybody's time is precious

- Be ready to learn at the start of class; we'll have you out of here on time
- Tardiness: arriving late, returning late after breaks, leaving during class, leaving early

**The following are not allowed:**

- Bare feet
- Side talking
- Lying down
- Inappropriate clothing
- Food or drink except water
- Phones that are visible in the classroom, bathrooms, or internship

*You will receive one verbal warning, then you'll have to leave the room.*

# Brachioradialis

Trail Guide, Page 133

Anterior View

**Brachioradialis** is superficial on the lateral side of the forearm.

Its long, oval belly forms a helpful dividing line between the flexors and extensors.

It is the only muscle that runs the length of the forearm but does not cross the wrist joint.

Anterior View

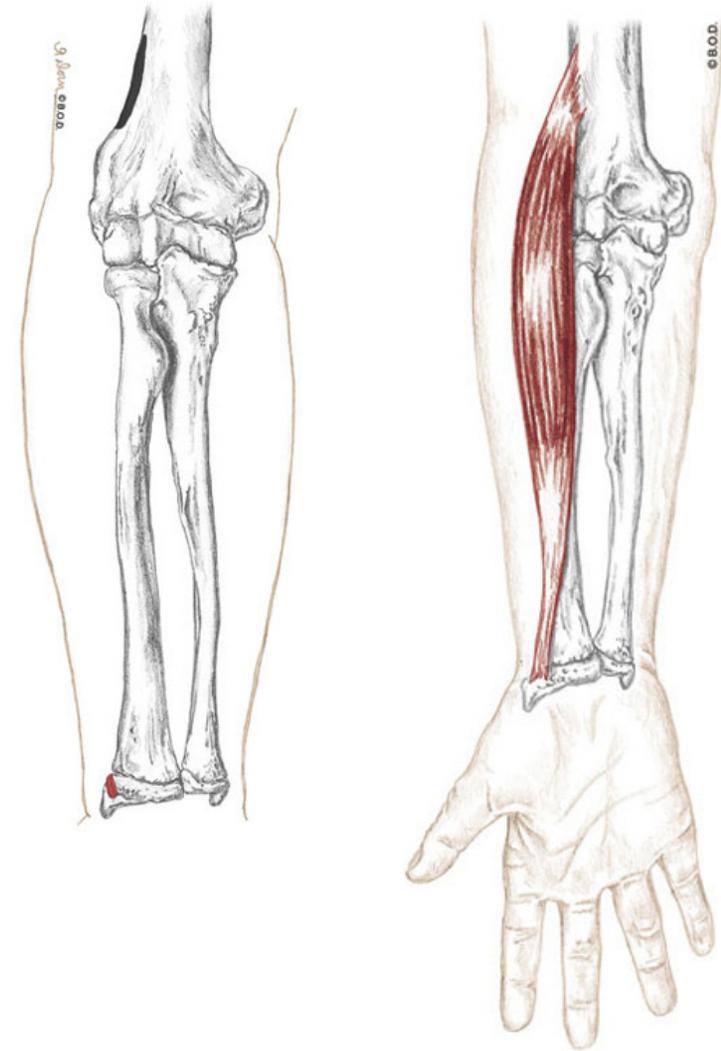

# Brachioradialis, page 133

**A** Flex the elbow (humeroulnar joint)

Assist to **pronate and supinate** the forearm when these movements are resisted

**O** Proximal two-thirds of the lateral supracondylar ridge of the humerus

**I** Styloid process of the radius

Anterior View

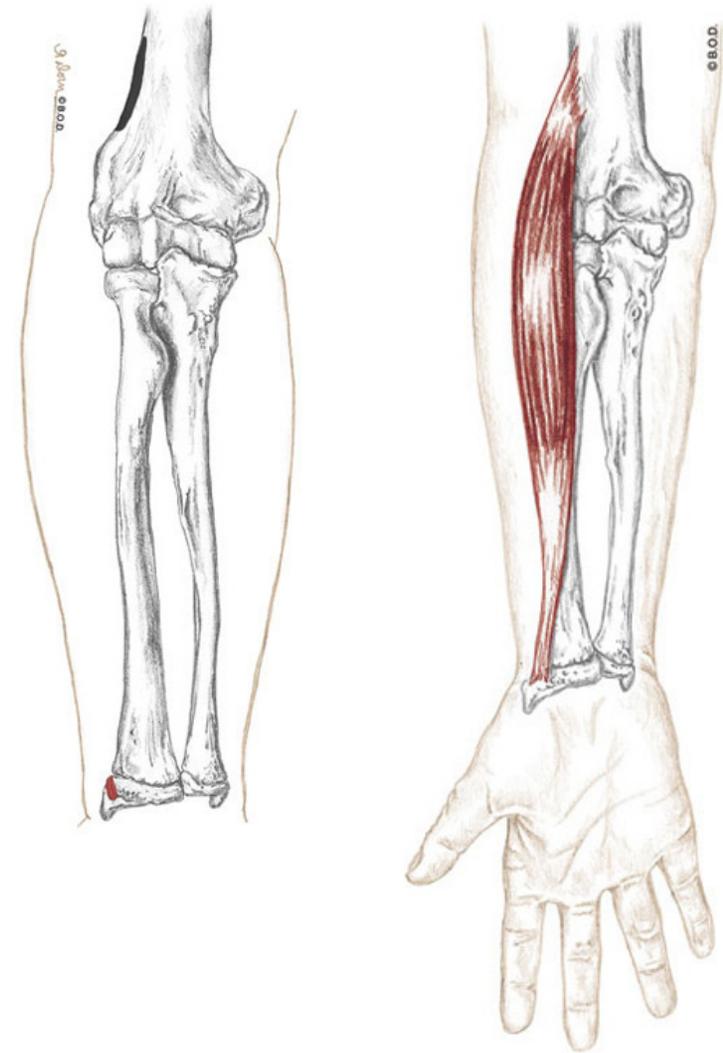

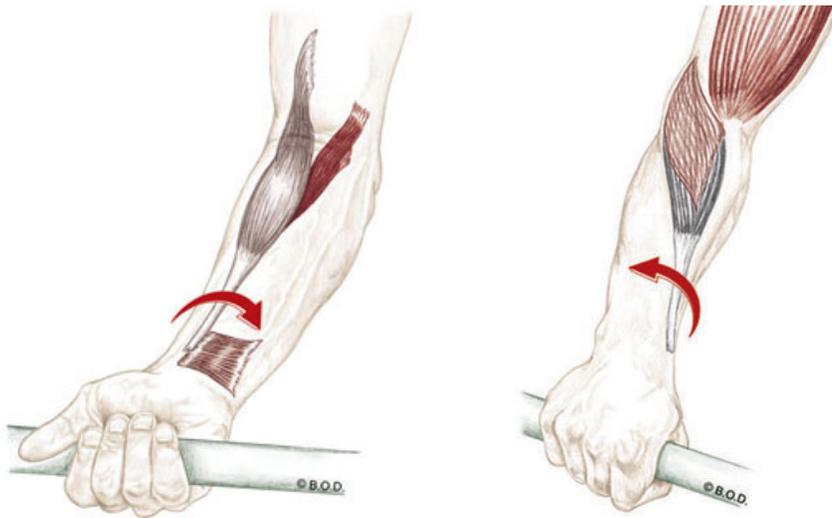

# Brachioradialis, page 133

**A** Flex the elbow (humeroulnar joint)

Assist to **pronate and supinate** the forearm when these movements are resisted

**O** Proximal two-thirds of the lateral supracondylar ridge of the humerus

48a A&P: Nervous System -  
Introduction, Physiology, and Cells

Packet E - 97

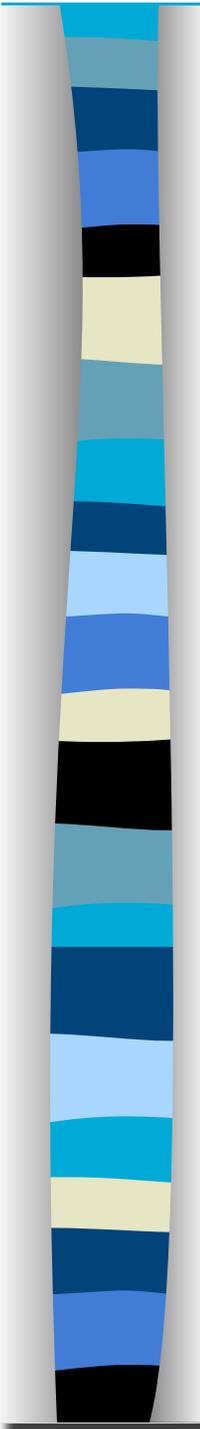

## Introduction

The body uses two systems to monitor and stimulate, changes needed to maintain homeostasis: endocrine and nervous.

Endocrine System

Nervous System

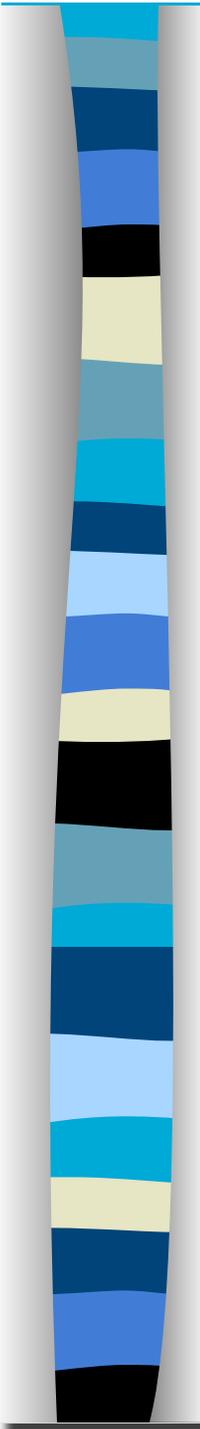

## Introduction

The \_\_\_\_\_ endocrine \_\_\_\_\_ system responds more slowly and uses \_\_\_\_\_ hormones \_\_\_\_\_ as chemical messengers to cause physiologic changes.

### Endocrine System

1. Slow response
2. Hormones

### Nervous System

## Introduction

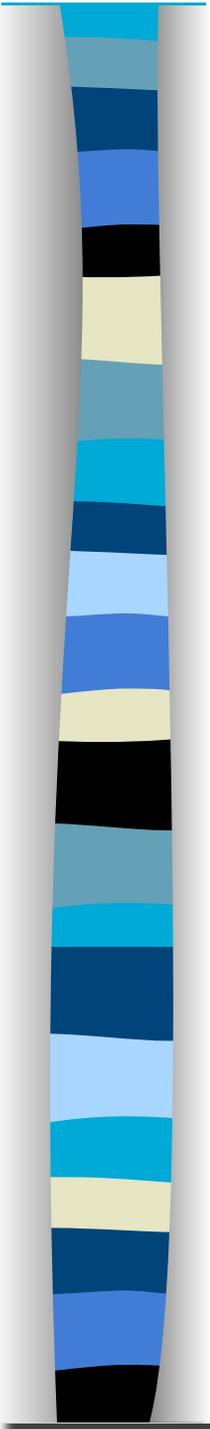

The \_\_\_\_\_ nervous \_\_\_\_\_ system responds to changes more rapidly and uses nerve \_\_\_\_\_ impulses \_\_\_\_\_ to cause physiologic changes.

### Endocrine System

1. Slow response
2. Hormones

### Nervous System

1. Rapid response
2. Nerve impulses (and neurotransmitters too)

## Introduction

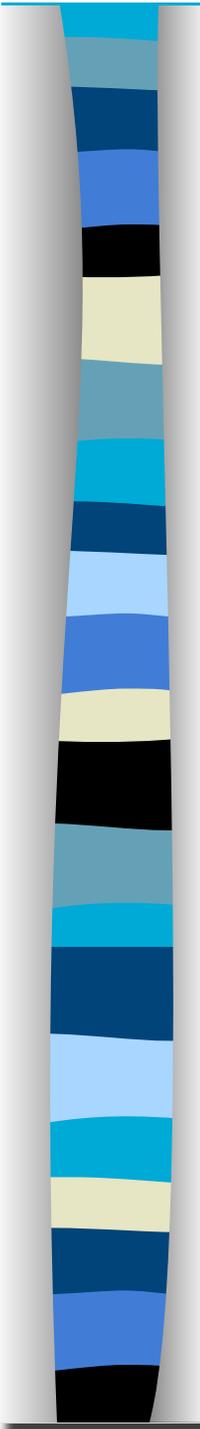

It is the nervous system that is the body's master control and communications system. It also monitors and regulates many aspects of the endocrine system.

### Endocrine System

1. Slow response
2. Hormones

### Nervous System

1. Rapid response
2. Nerve impulses (and neurotransmitters too)
3. Body control
4. Body communications
5. Monitors and regulates the endocrine system

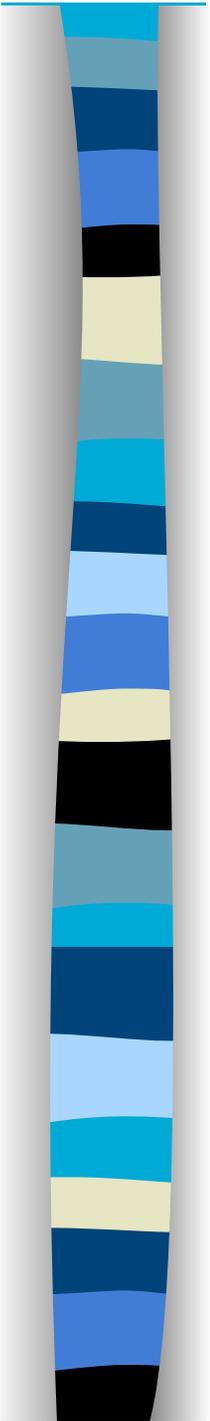

## Introduction

Every thought, action, and sensation reflects nerve activity.

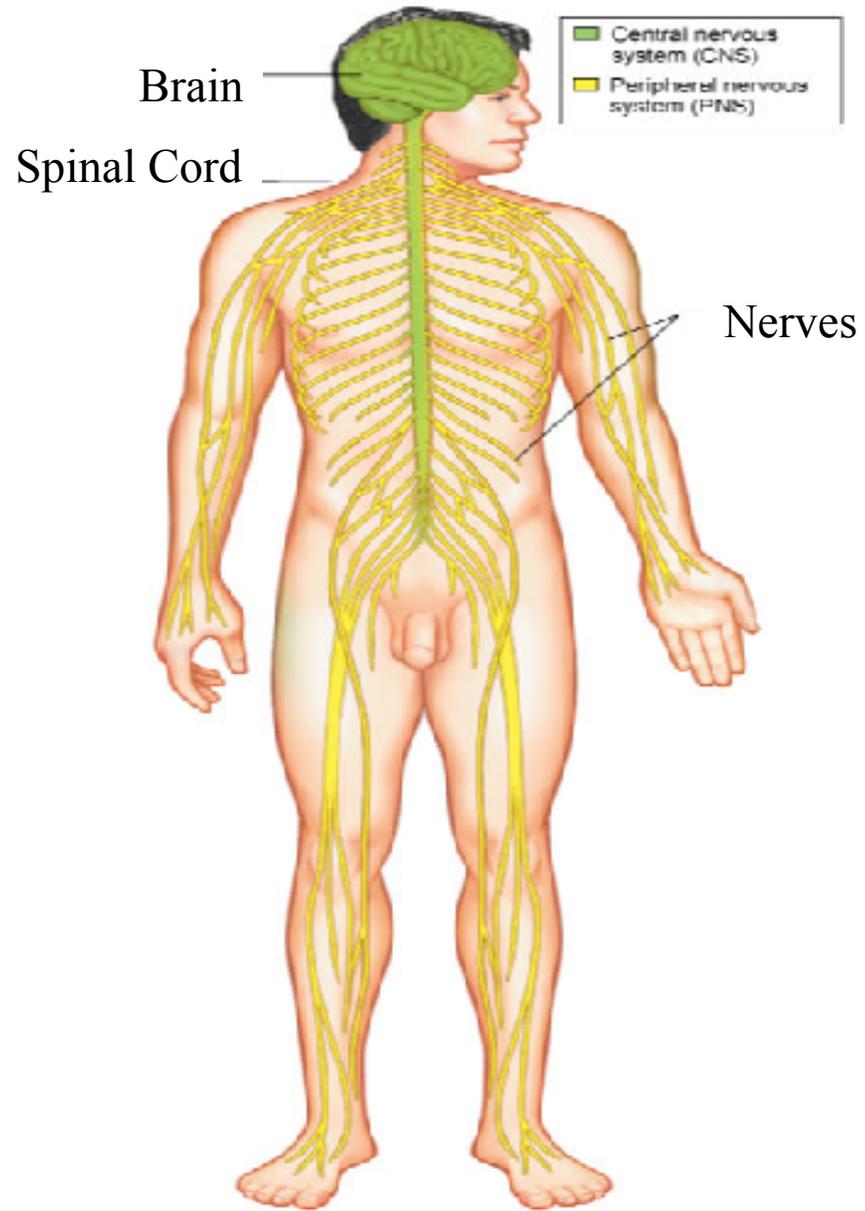

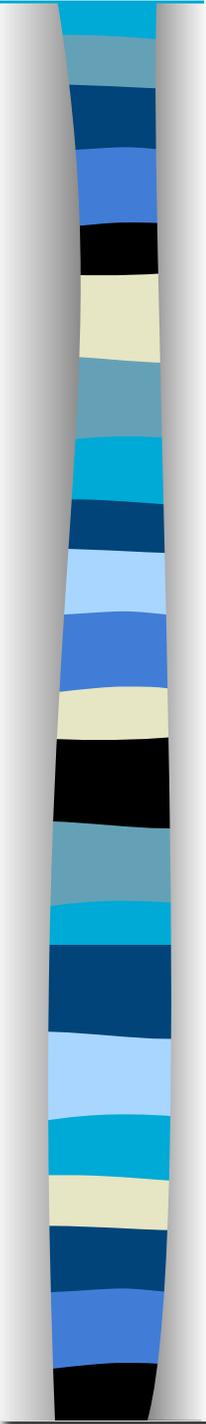

We are what our brain has experienced.

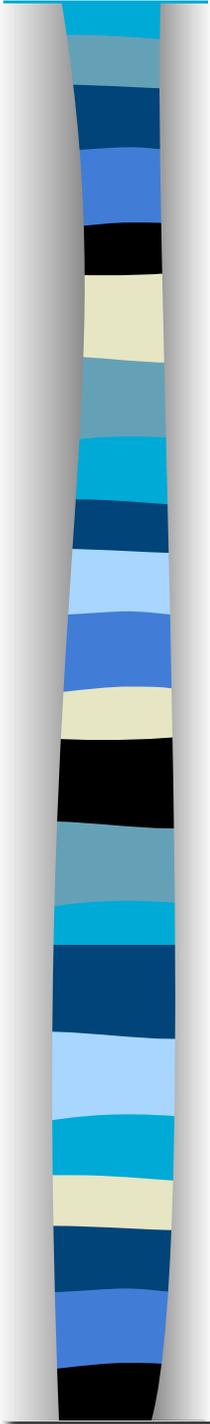

If all past sensory input could be completely erased, we would be unable to walk, talk, or communicate. We would remember no pain or pleasure.

# Anatomy

- Brain
- Spinal cord
- Cranial nerves
- Spinal nerves
- Cerebrospinal fluid
- Meninges
- Sense organs
- Neurotransmitters

Physiology

Sensory input

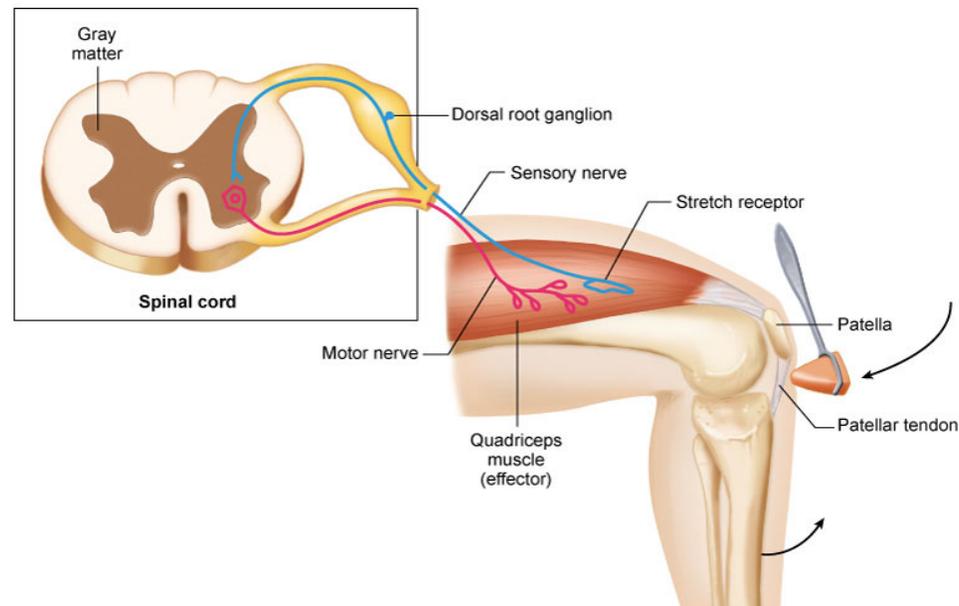

Interpretive functions

Motor output

Higher mental functioning and emotional responsiveness

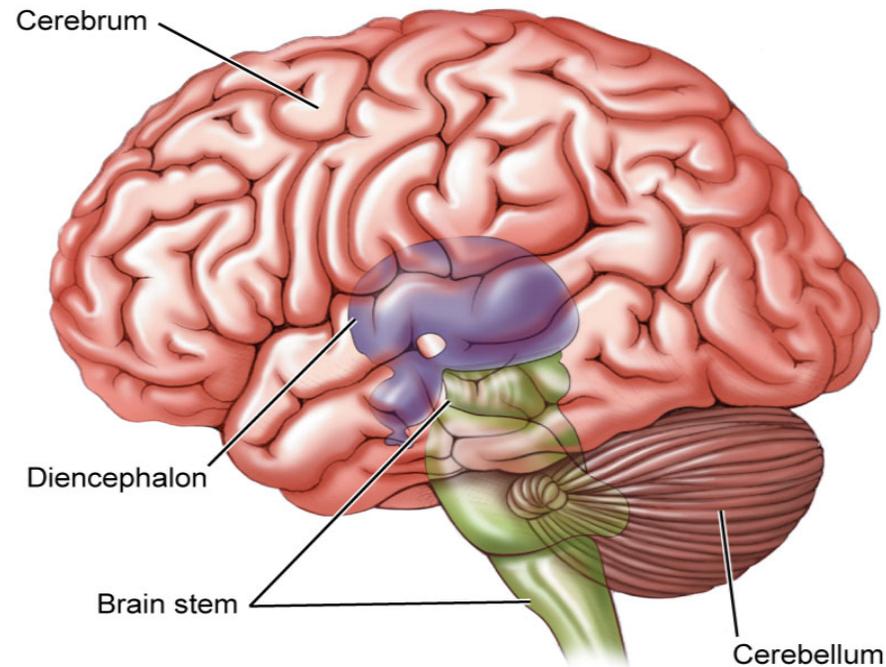

# Physiology

**Sensory input** Sensory receptors detect changes, or stimuli, inside the body such as lowered blood sugar levels, or outside the body such as an increase in temperature. Sensory neurons carry nerve impulses into the spinal cord and brain.

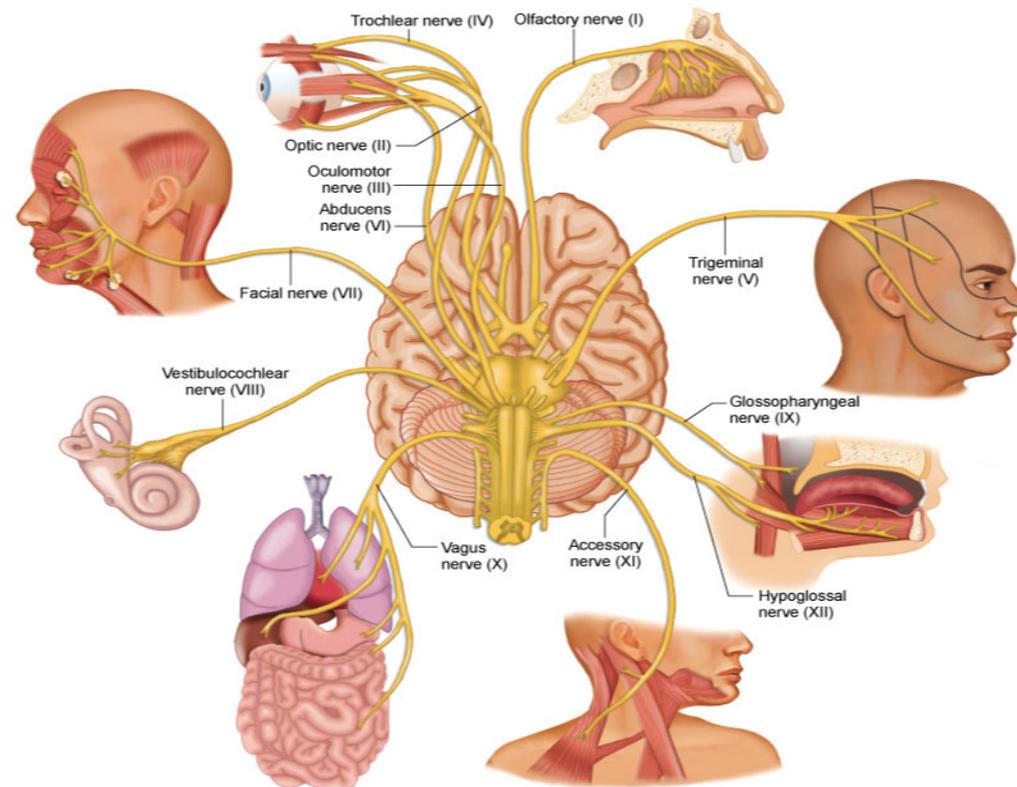

# Physiology

**Interpretive functions** The spinal cord and brain integrate sensory information. They analyze it, store some of it, and decide on appropriate responses.

# Physiology

**Motor output** Motor neurons carry nerve impulses from the brain and spinal cord to smooth muscle, cardiac muscle, skeletal muscle, and glands.

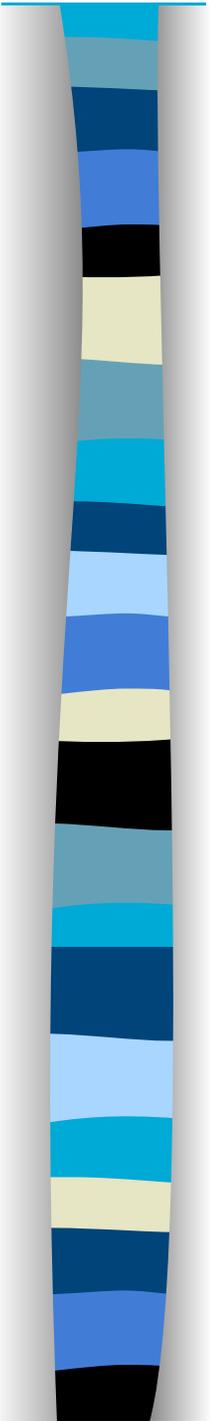

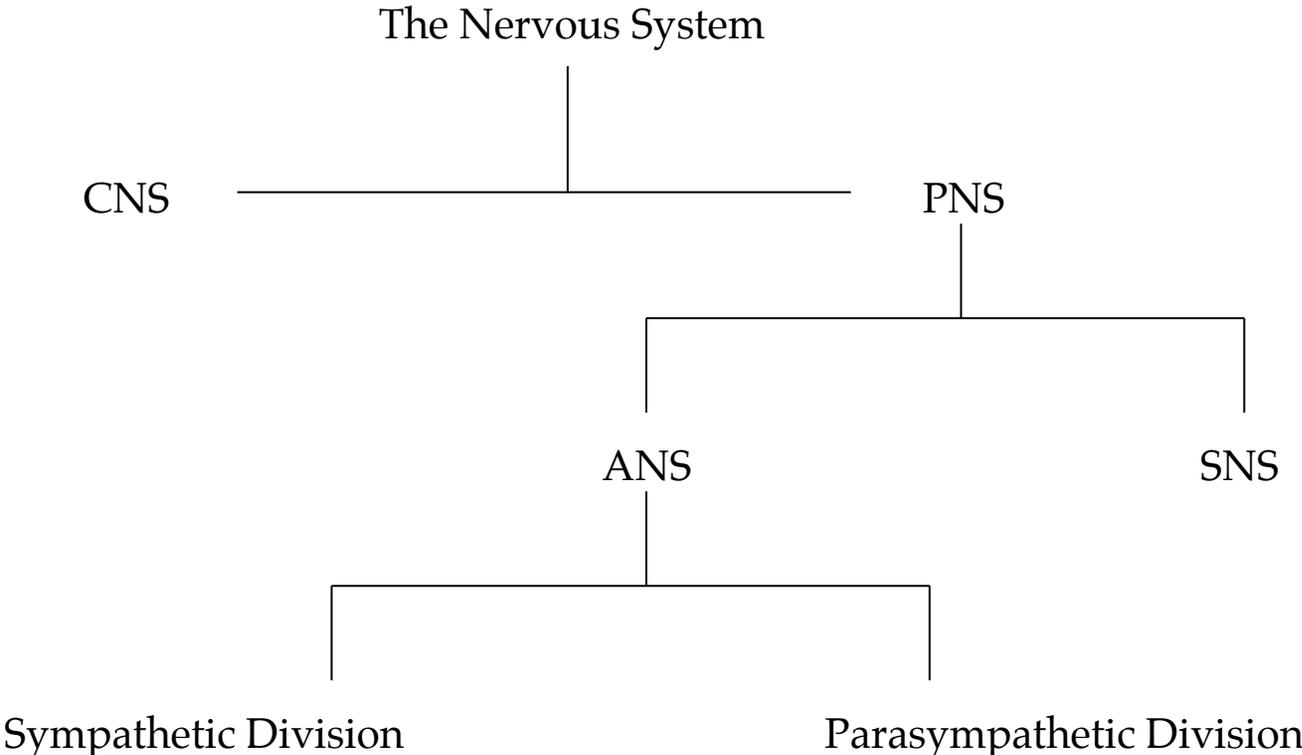

# Physiology

**Higher mental functioning and emotional responsiveness** Examples:  
cognition, memory, joy, excitement, anger, anxiety.

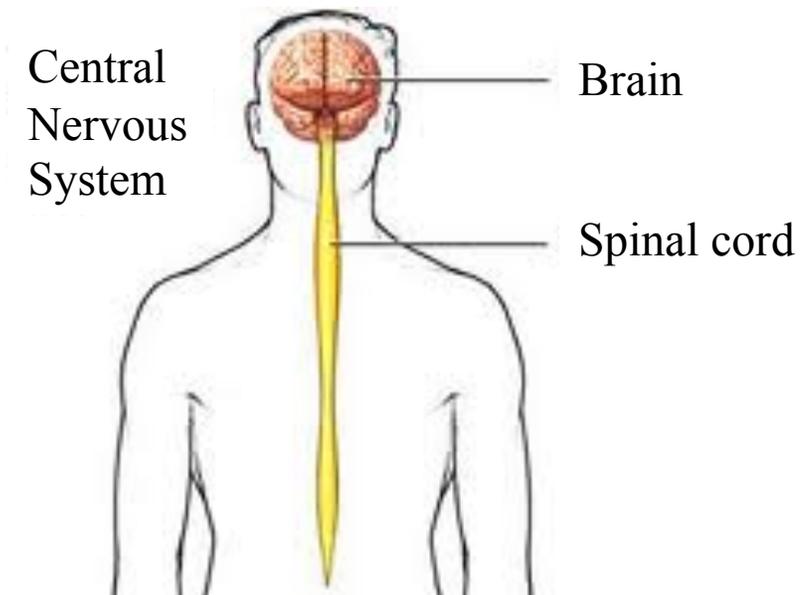

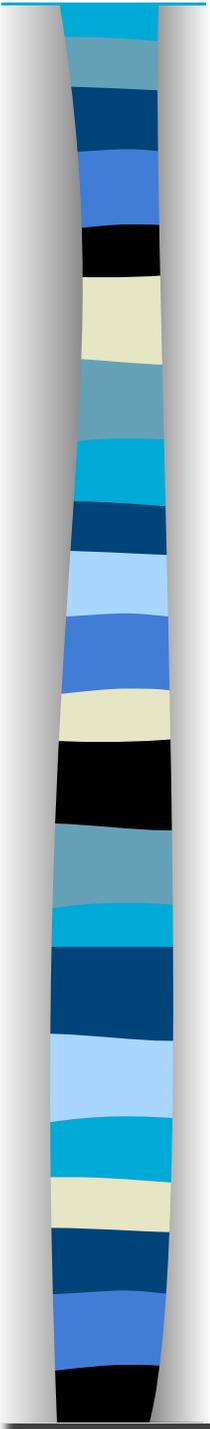

# Basic Organization

## Basic Organization

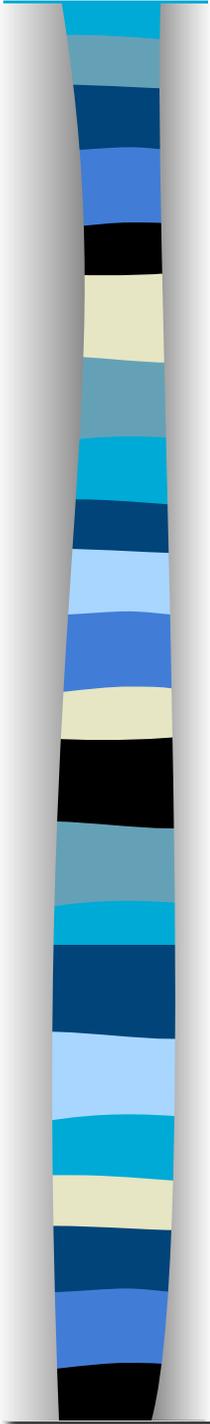

**Central nervous system (AKA: CNS)** Body system primarily concerned with interpreting incoming sensory information and issuing instructions in the form of motor responses. Includes: brain, meninges, cerebrospinal fluid, and spinal cord.

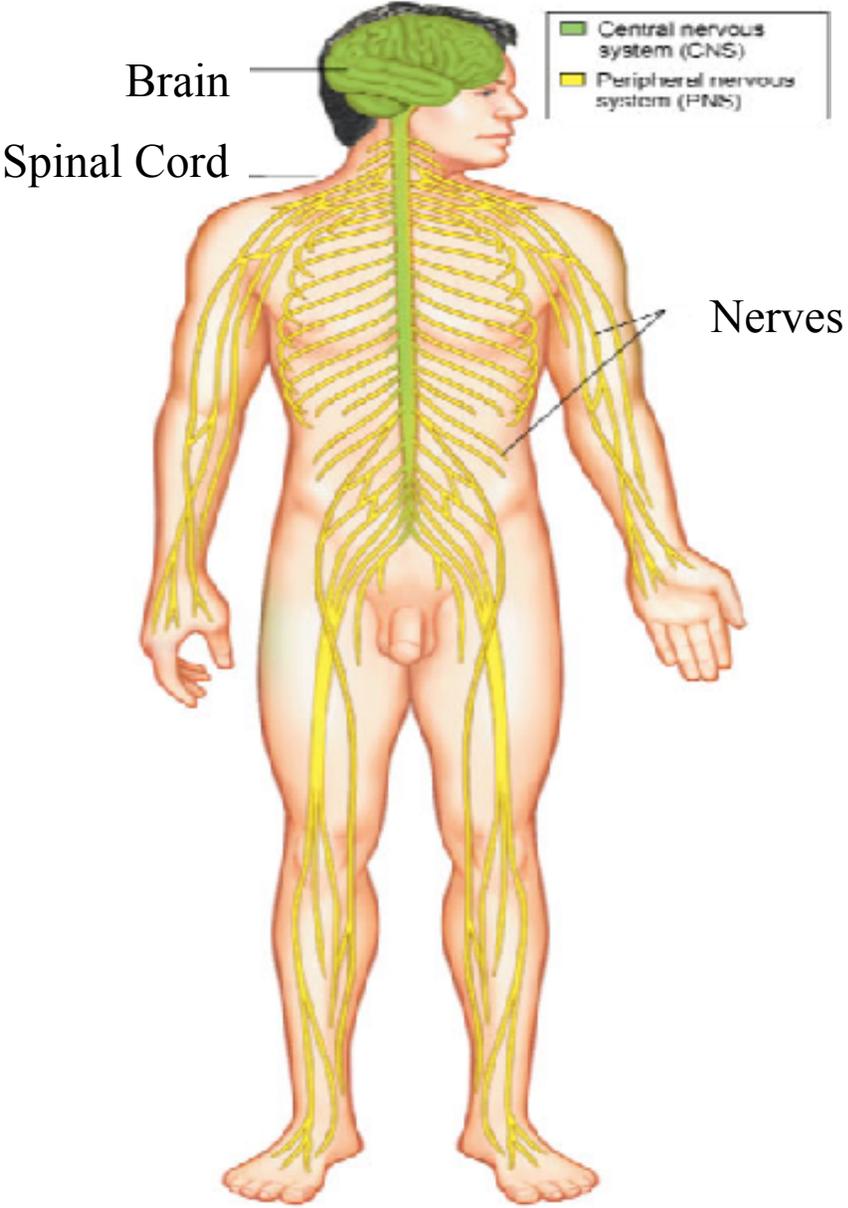

## Basic Organization

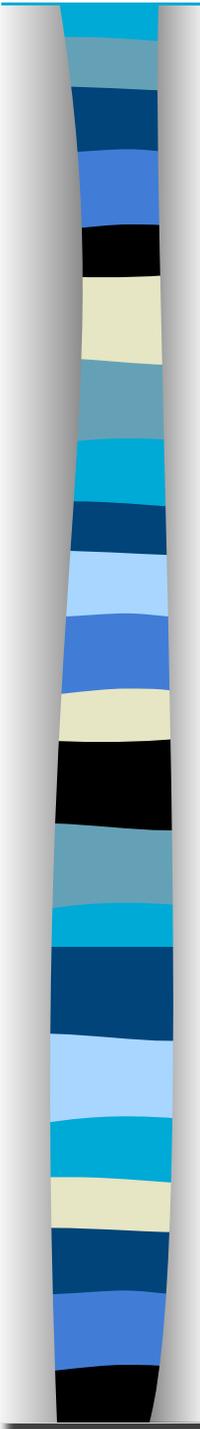

**Peripheral nervous system (AKA: PNS)** Composed of the cranial and spinal  
          nerves           emerging from the CNS.

CNS in green

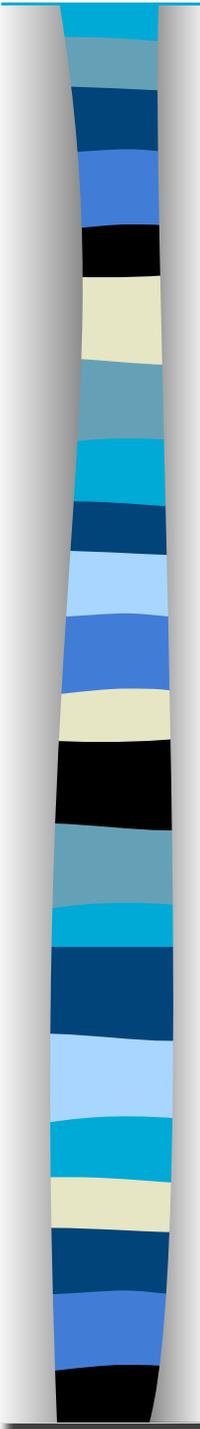

PNS in yellow

## Basic Organization

**Somatic nervous system (AKA: SNS)** Voluntary division of the PNS that transmits information from bones, muscles,           joints          , skin, and special senses of vision, hearing, taste, and smell into the CNS. Carries impulses from the CNS to           skeletal           muscles.

## Basic Organization

**Autonomic nervous system (AKA: ANS)** Involuntary,  
division of PNS supplying impulses to smooth muscle, cardiac muscle,  
and glands. Has sympathetic and parasympathetic divisions.

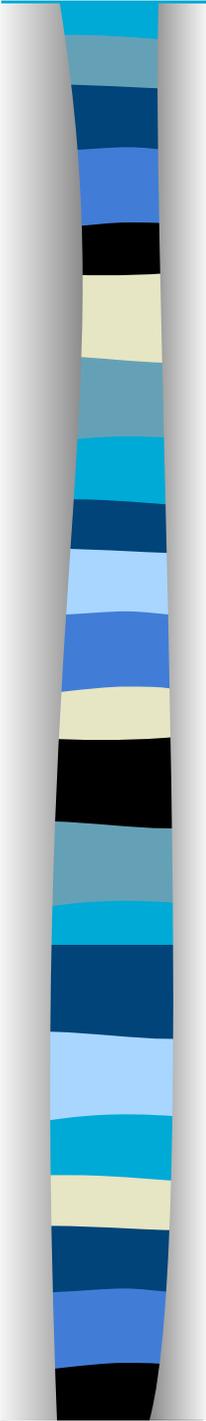

**Sympathetic division of the ANS** - Fight, Flight, or Freeze

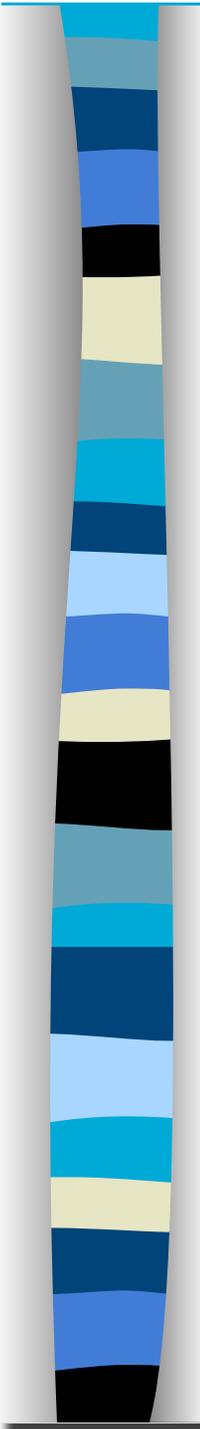

**Parasympathetic division of the ANS** - Rest and Digest

# Cells of the Nervous System

Neuroglia

Neuron

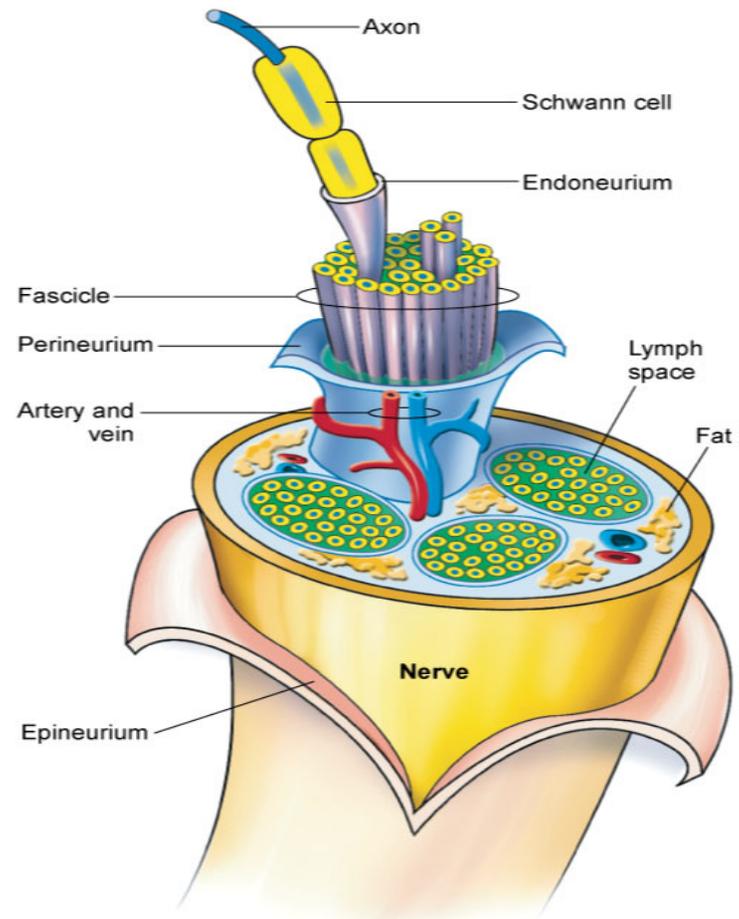

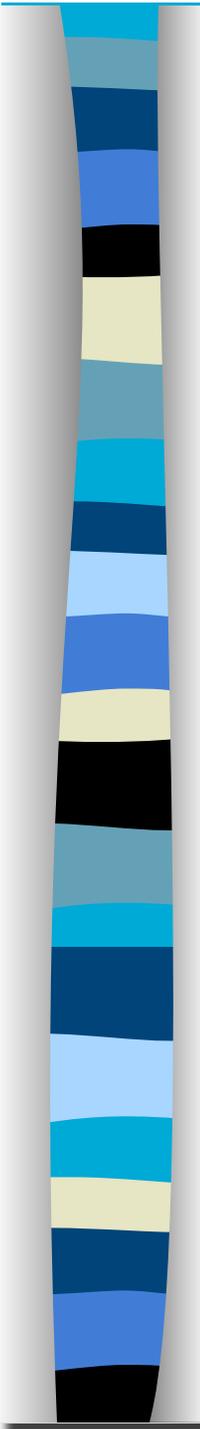

## Cells of the Nervous System

**Neuroglia (AKA: glia, glial cells)** \_\_\_\_\_ Connective \_\_\_\_\_ tissue that supports, nourishes, protects, insulates, and organizes neurons. Types: astrocyte, ependymocyte, microglia, oligodendrocyte, Schwann cell, satellite cell.

# Cells of the Nervous System

**Neuron** Impulse-conducting cell. Properties:  
Excitability  
Conductibility  
Secretability

## Cells of the Nervous System

**Excitability** The ability to \_\_\_\_\_ respond \_\_\_\_\_ to a stimulus and convert it to a nerve impulse.

**Conductibility** The ability to transmit the \_\_\_\_\_ impulses \_\_\_\_\_ to other neurons, muscles, and glands.

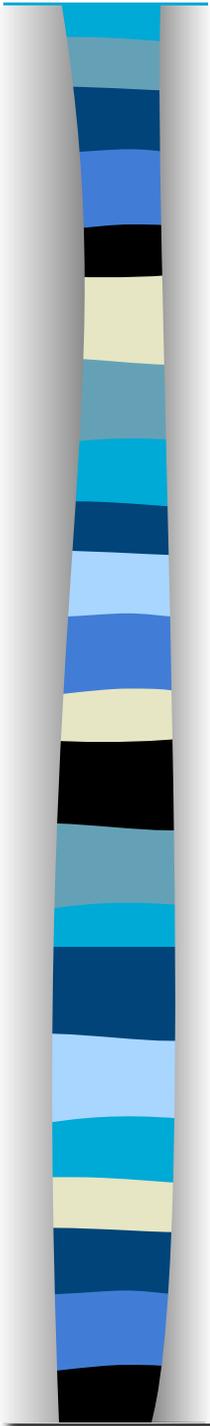

**Secretability** The ability to release \_\_\_\_\_ neurotransmitters \_\_\_\_\_ that help conduct an impulse.

## Parts of a Neuron

Cell body

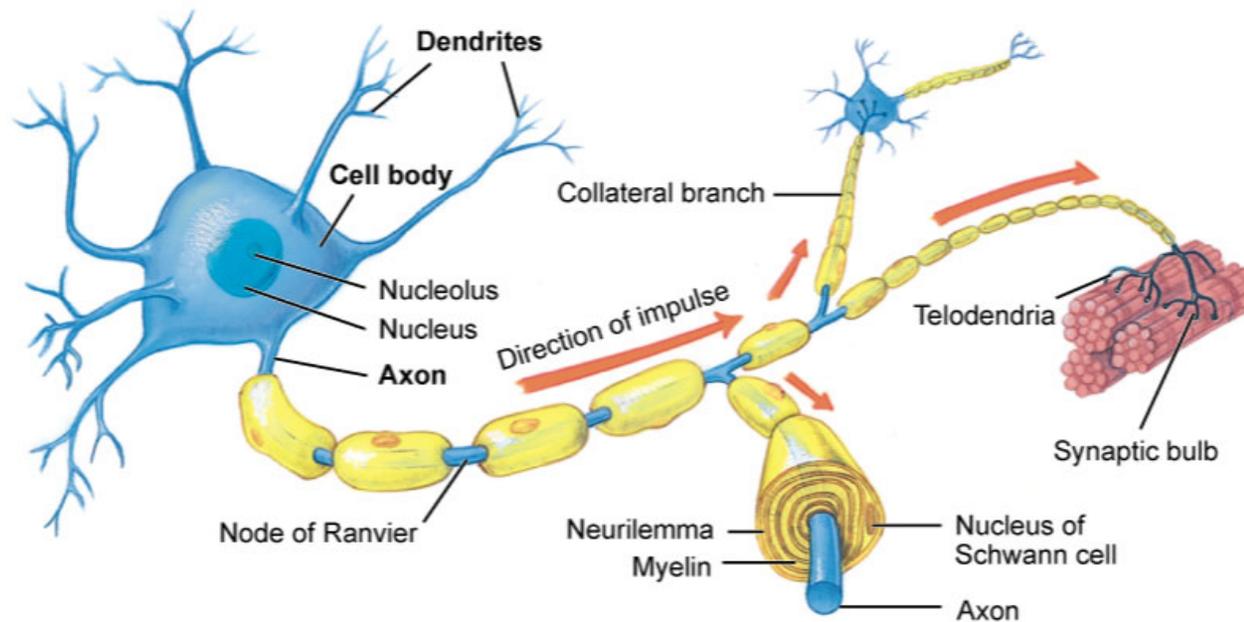

Dendrite

Axon

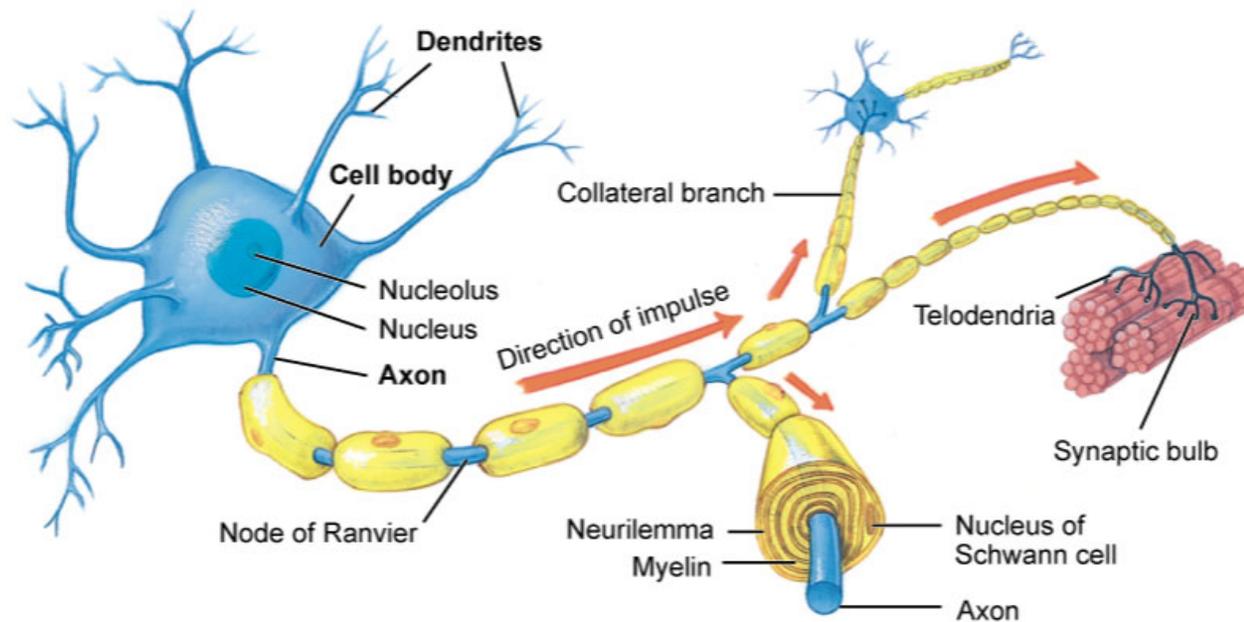

## Parts of a Neuron

**Cell body (AKA: cyton)** Main region of the neuron containing the nucleus, ribosomes, and other organelles. The gray matter of the nervous system.

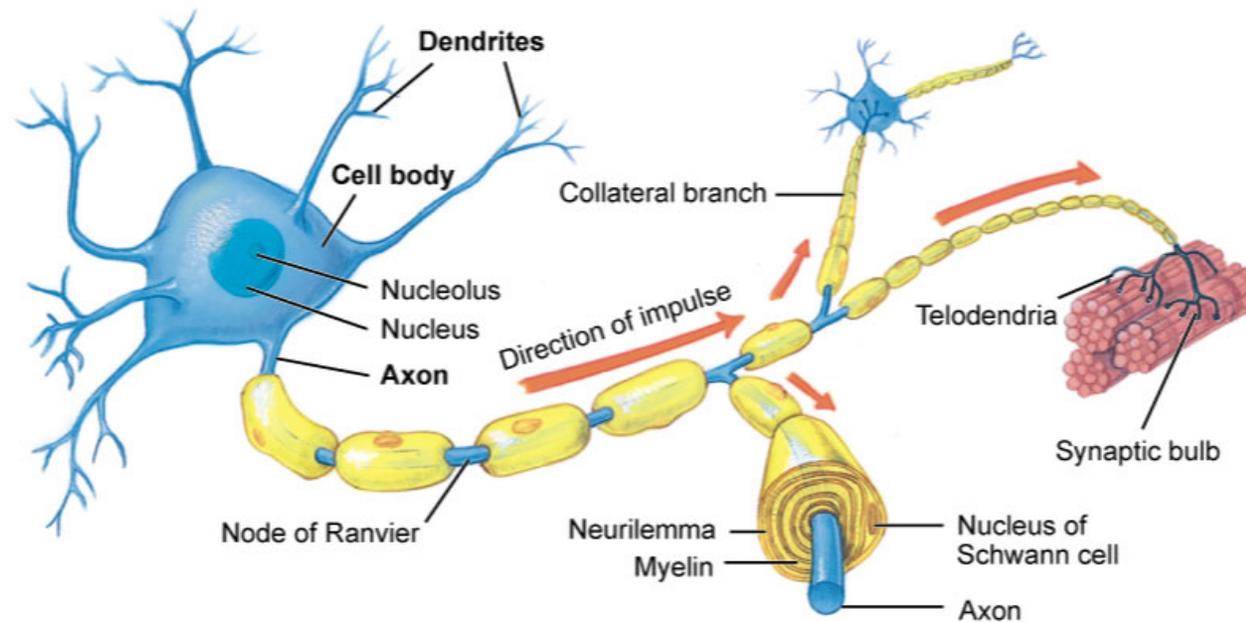

## Parts of a Neuron

**Dendrite** Short, narrow, neural extensions that receive and transmit stimuli \_\_\_\_\_ toward \_\_\_\_\_ the neuron's cell body.

## Parts of a Neuron

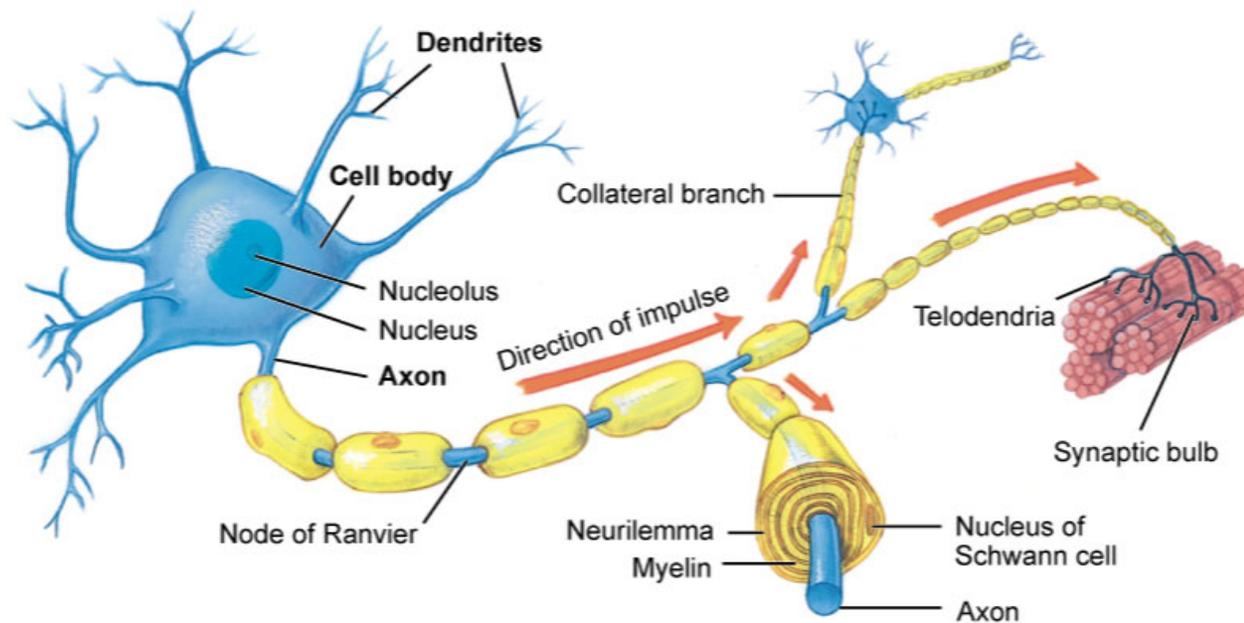

**Axon** Neural extension that carries nerve impulses away from the neuron toward another neuron, a muscle cell, or gland.

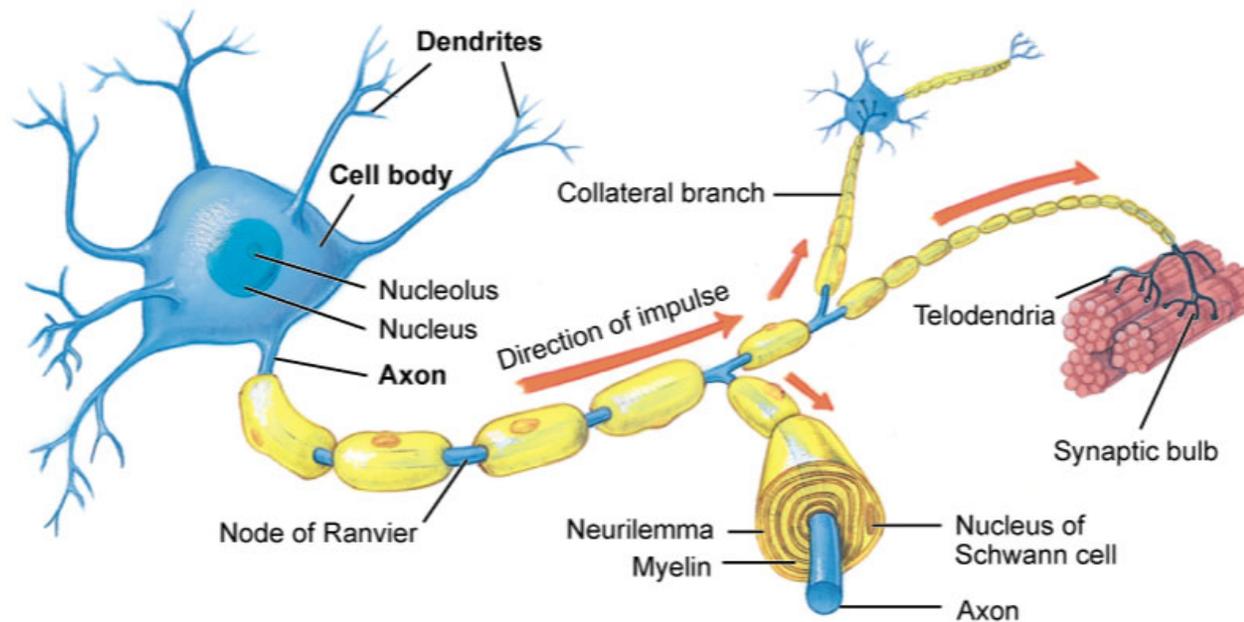

## Axon Structures

**Telodendria** Clusters of short, fine \_\_\_\_\_ filaments \_\_\_\_\_ located at the end of each axon.

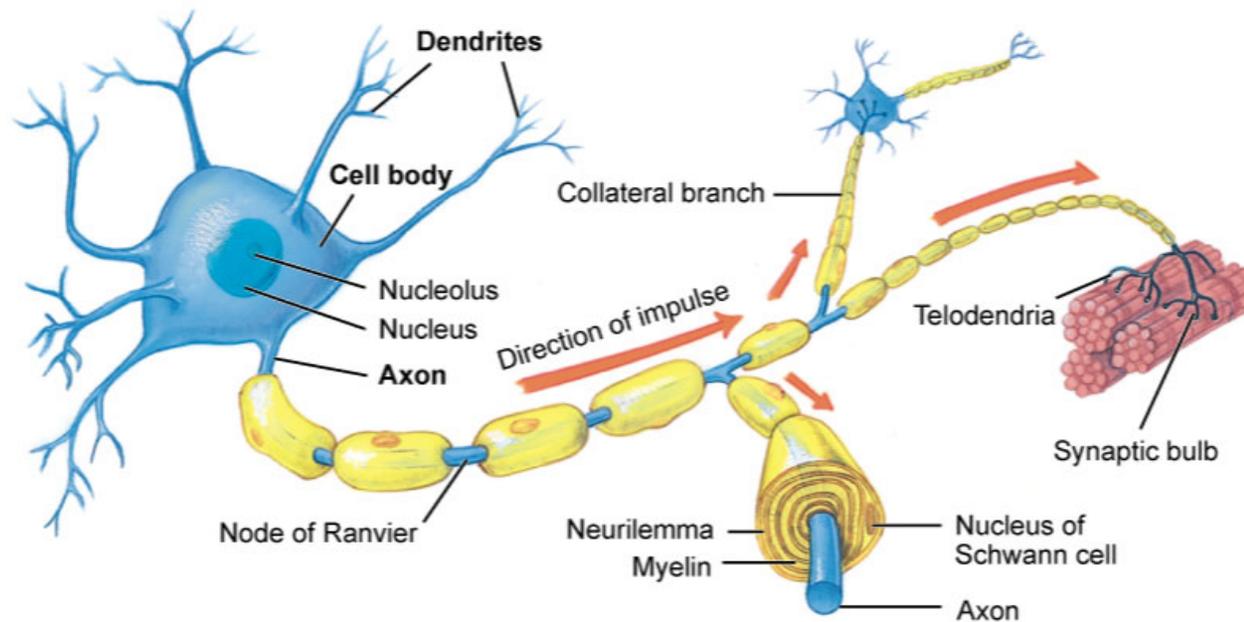

## Axon Structures

**Myelin sheath** \_\_\_\_\_ Fatty \_\_\_\_\_ tissue layer surrounding most axons in the PNS. Insulates the neuron and increases nerve impulse speed.

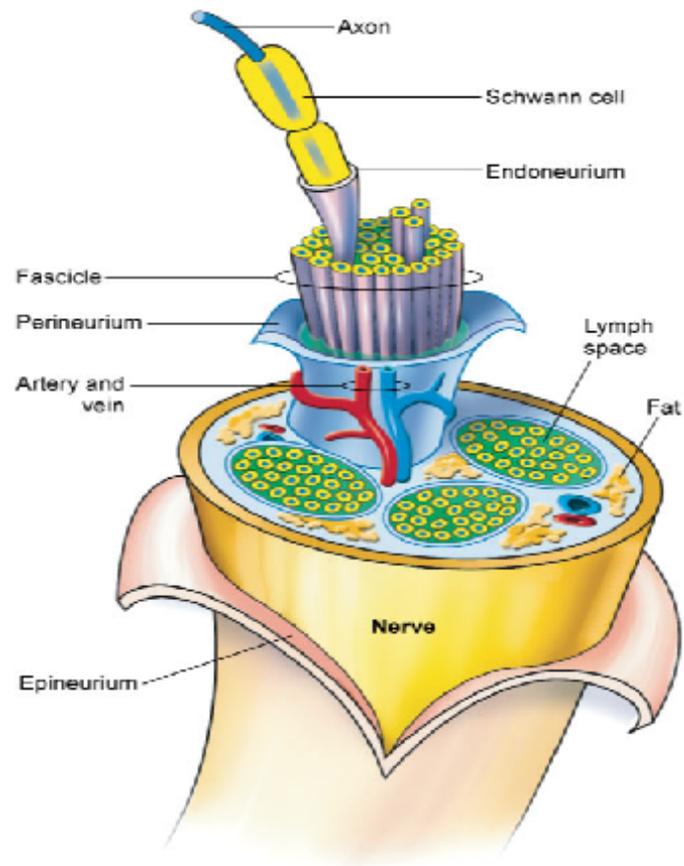

## Axon Structures

**Nodes of Ranvier** \_\_\_Gaps\_\_\_ along myelinated axons. Increase speed of a nerve impulse by allowing the impulse to jump from one node to another.

## Connective Tissues: Neurons to Nerve

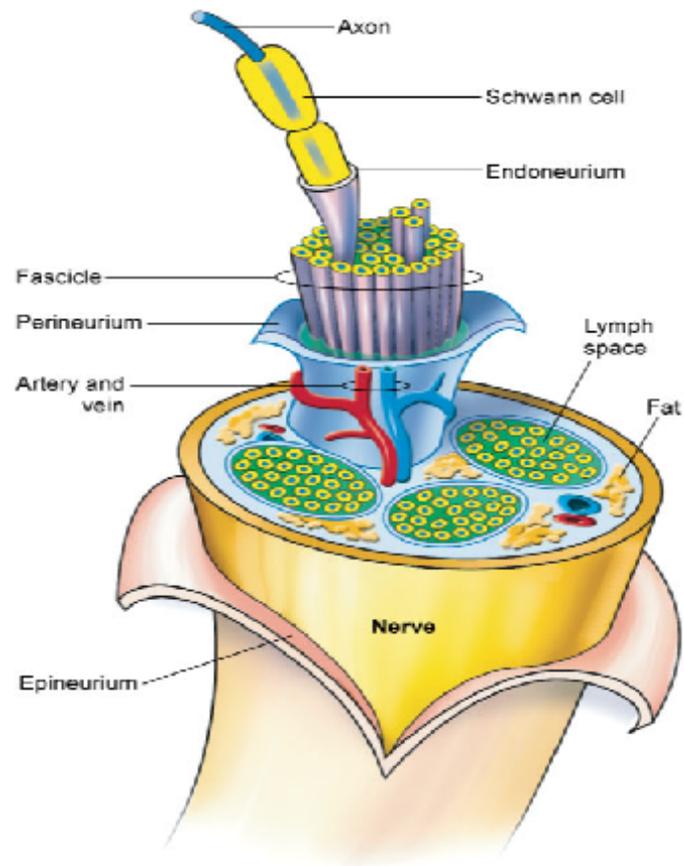

neuron → fascicle → nerve  
endoneurium → perineurium → epineurium

## Connective Tissues: Neurons to Nerve

neuron → fascicle → nerve  
endoneurium → perineurium → epineurium

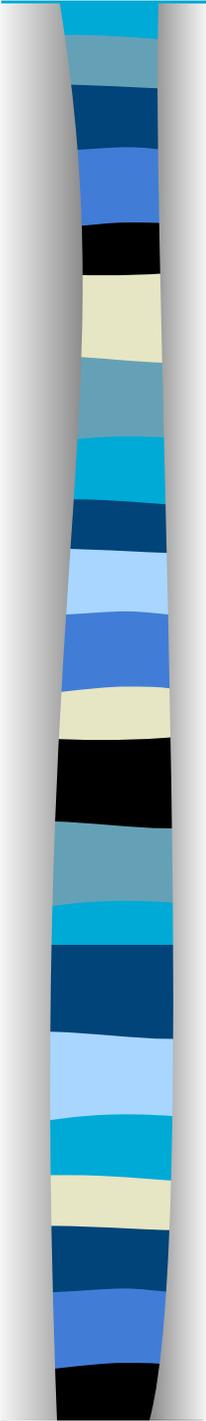

# Classification of Neurons

Sensory neuron

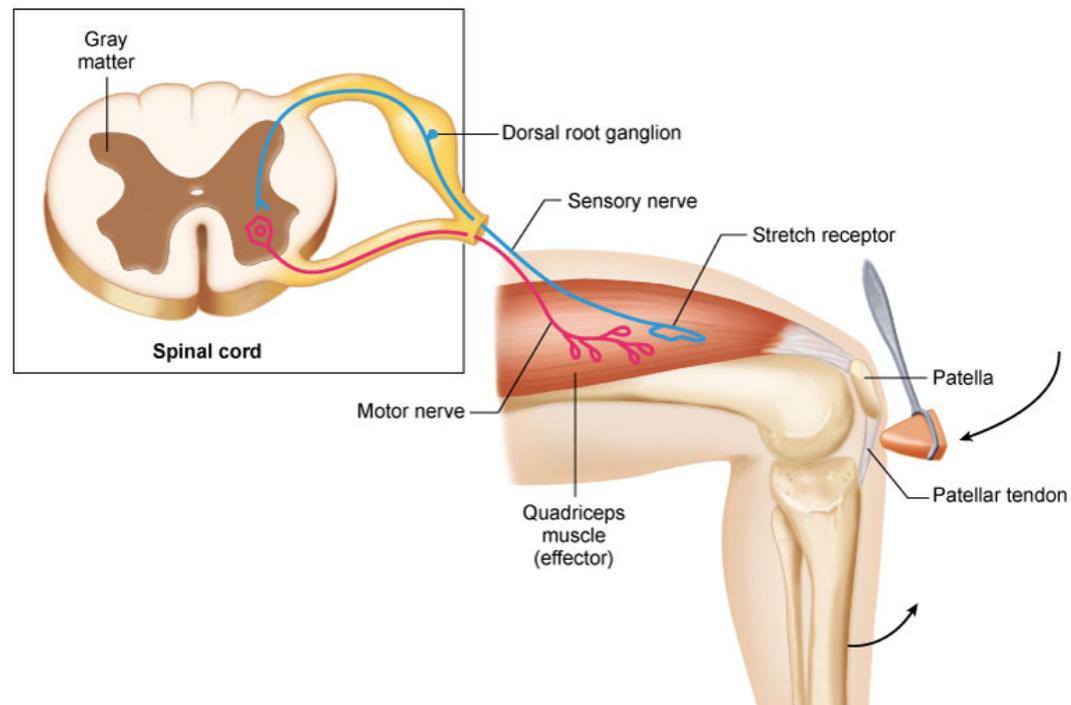

Interneuron

Motor neuron

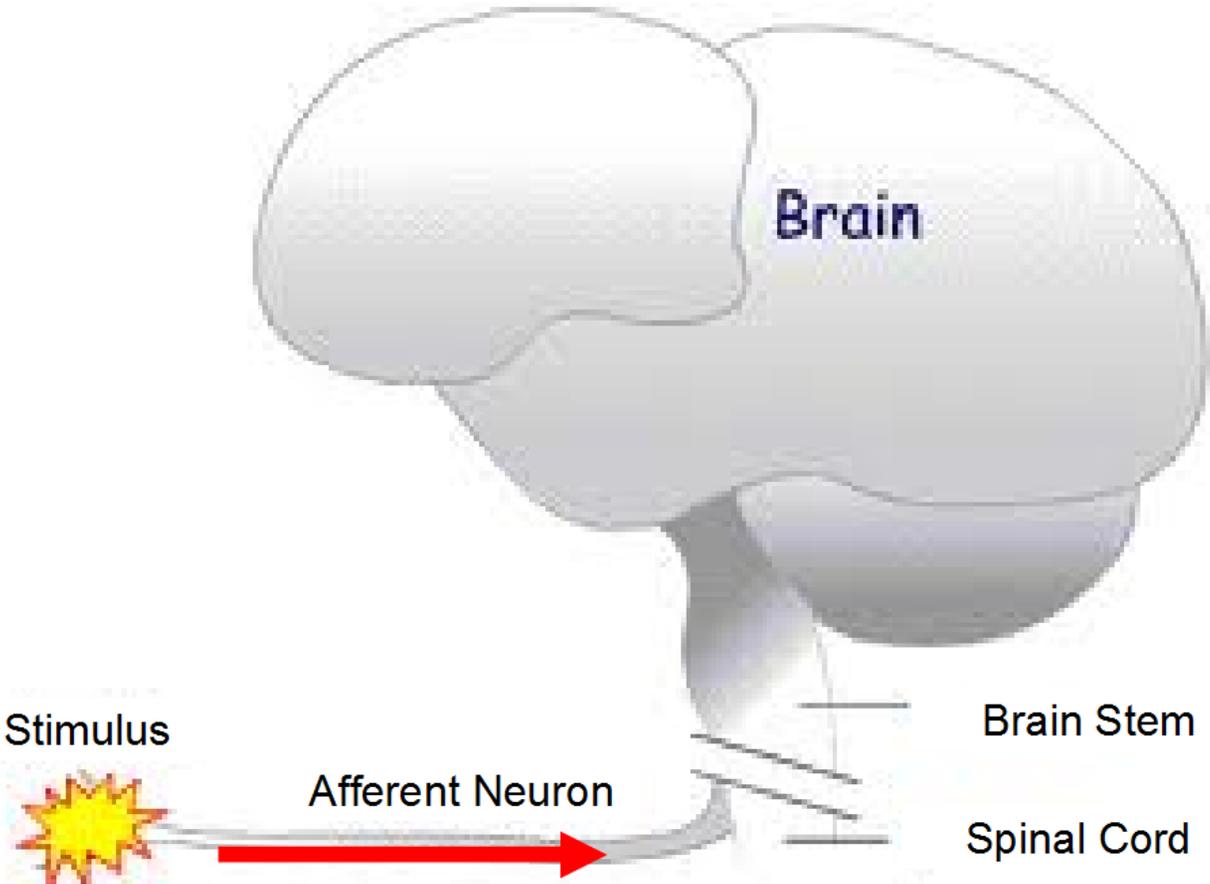

## Classification of Neurons

**Sensory neuron (AKA: afferent neuron)** Carries impulses to the CNS.

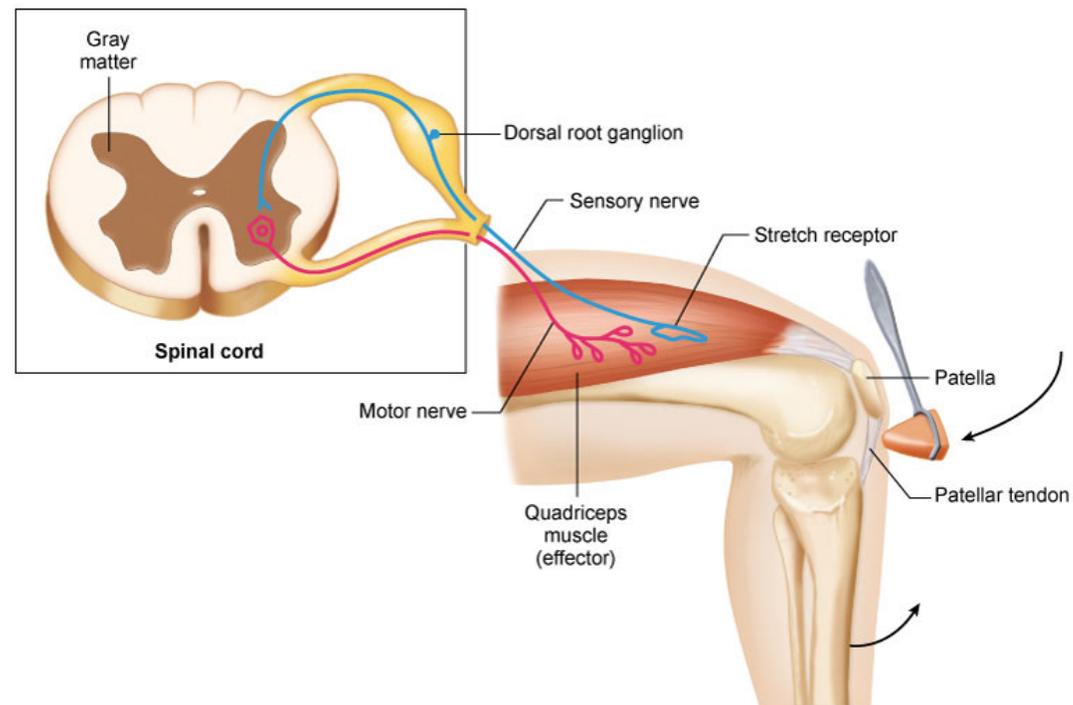

# Classification of Neurons

**Sensory neuron (AKA: afferent neuron)** Carries impulses to the CNS.

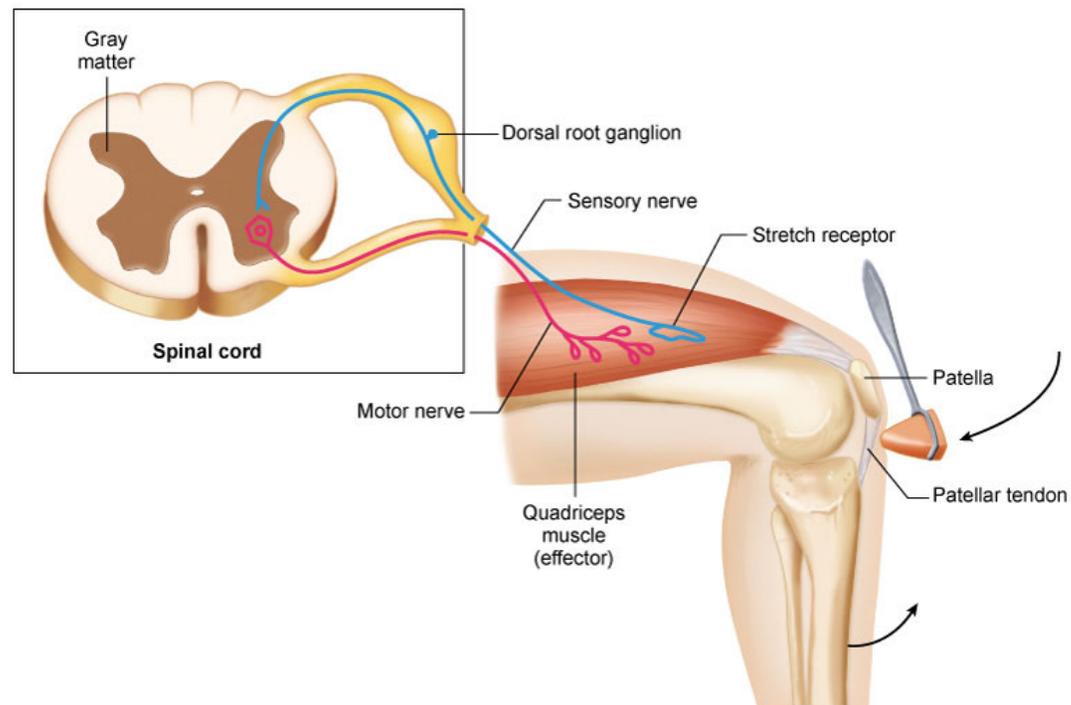

## Classification of Neurons

**Interneuron (AKA: association neuron)** Neuron between a sensory and motor neuron. Participates in integrative functions.

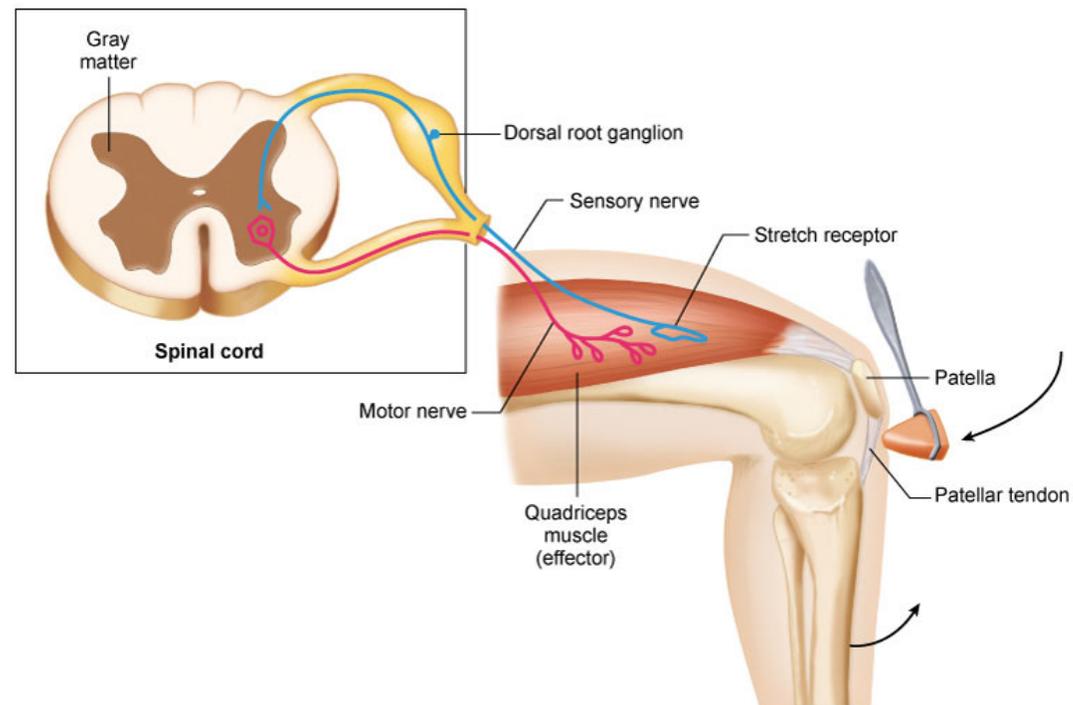

## Classification of Neurons

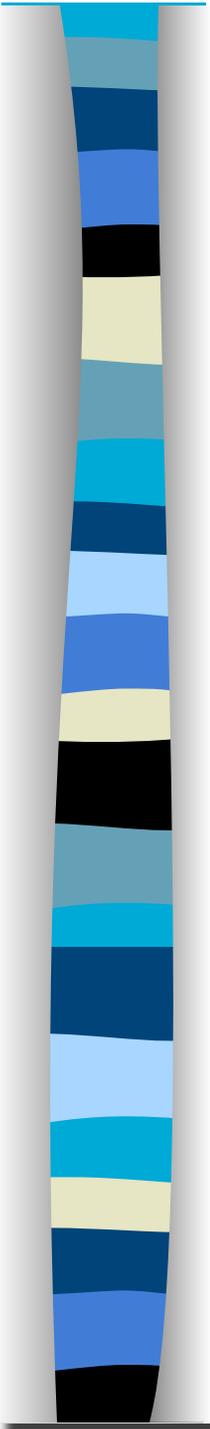

**Motor neuron (AKA: efferent neuron)** Sends a nerve impulse to effectors.

## Classification of Neurons

**Effector** Any muscle or gland that motor nerves act on.

## Nerve Impulses

**Nerve impulse (AKA: action potential)** An electrical signal that conveys information along a neuron.
